Rajinder Kumar joined ICAR-CPRI in November, 1987. I have 38 years of experience in maintenance of virus cultures on indicator host. I produced the virus antiserum against PVX, PVS, PVY, PVA and PVM. I also produced the ELISA kits against the above potato viruses. The kits supplied to ICAR-CPRI regional stations for the production of the nucleus potato seed production. I did the field inspection of potato crop of Technico Agri Science, PepsiCo Holding Ltd and Mahindra HZPC for the export purpose. I tested virus samples of All India Coordinated Research Project on Potato. I did quarantine clearing testing against pathogen of the different companies for the production of the potato seed.
